                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       histatin polynucleotide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a bovine histatin like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           histidine rich and specific to the salivary secretions. They are believe to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polynucleotide, polypeptide, or the cosmetic composition comprising the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The

The invention discloses isolated histatin polynucleotides and collections, which comprise sequences expressed in bovine. Histatins are histatine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the candidosis. Also disclosed are compositions comprising the histatin of conjunction as part of the non-immune defence system, particularly in the candidosis. Also disclosed are compositions comprising the histatin of complypeptide or polynucleotide, and at least one component consisting of comprising the polynucleotide, and at least one components. The comprising the polynucleotide, is useful for treating (e.g. gene therapy) a comprising the polypeptide, is useful for treating (e.g. gene therapy) a comprising the polypeptide, is useful for treating (e.g. gene therapy) a comprising or in the positional cloning of genes. Specifically, the polypeptide or polynucleotide is also useful for treating fungal or bacterial compositions of the oral cavity (e.g. dental caries, plaque or tartar), coused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating coused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating consolutions in also useful for veterinary applications e.g. for collections mastitis. The sequence presented is a bovine histatin like

Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tattar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a bovine histatin like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polymucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polymucleotide, polypeptide, or the cosmetic composition comprising the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The histatic polyment of the polyment o
                                                                                                                                                                                                                                                     non-immune defence system; oral candidosis; gene therapy; microbial infection; fungal infection; dental caries; plaque; tar cystic fibrosis; systemic infection; Candida infection; mastitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The

                                                                                                                                                                                                                                                                                                                                                                                                     ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are consistidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the crandidosis. Also disclosed are compositions comprising the histatin candidosis. Also disclosed are compositions comprising the histatin polypuptide or polynucleotide, and at least one composition consisting of comprising the polypuptide, is useful for treating (e.g. gene therapy) a discrete in a mammal, particularly microbial or fungal infections. The comprising the polypuptide, is useful for treating (e.g. gene therapy) a constatin polynucleotide is also useful in genome mapping, physical companing or in the positional cloning of genes. Specifically, the colypeptide or polynucleotide is also useful for treating fungal or bacterial confections of the oral cavity (e.g. dental caries, plaque or tartar), caused by Pseudomonas aeruginoses) mucosa or eye, as well as for treating caused by Pseudomonas aeruginoses), mucosa or eye, as well as for treating corpolynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a bovine histatin like conceptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The comprising the polypeptide, is useful for treating (e.g. gene therapy) a comprising the polypeptide, is useful for treating (e.g. gene therapy) a comprising the polypeptide is also useful in genome mapping, physical platatin polynucleotide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental carries, plaque or tartar), consists, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a bovine histatin like

                                                                                                                                                                            The invention discloses isolated histatin polynucleotides and comprises sequences expressed in bovine. Histatins are polypeptides, which comprise sequences expressed in bovine. Histatins are comprised in the comprise of the continuous defence system, particularly in the coral cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral conditions is. Also disclosed are compositions comprising the histatin of polypeptide are compositions comprising the histatin of polypucleotide, polypeptide, or the cosmetic composition comprising the polypeptide, is useful for treating (e.g. gene therapy) a discorder in a mammal particularly microbial or fungal infections. The chistatin polynucleotide is also useful in genome mapping, physical conspiration or in the positional cloming of genes. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial conjugations of the oral cavity (e.g. dental caries, plaque or tartar), consistency vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating corpolynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a bovine histatin like

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to human lysine-rich statherin protein (IRSP) (AAY94526). The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with human statherin (the present sequence) and human basic histidine-rich protein (AAY94528). Human statherin is a phosphoprotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes meallitus), bacterial and fungal infection and cancers (such as leukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful for diagnosis of the above disorders.

Human statherin is a phosphoprotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The IRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of IRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, adenocarcinoma, melanoma). Antibodies to IRSP may be useful for diagnosis of the above disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to human lysine-rich statherin protein (LRSP) (AAY94526). The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with human statherin (AAY94527) and human basic histidine-rich protein (the present (AAY94527)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tang

The invention describes new transplant compositions comprising antimicrobial polypeptides or pore forming agents and/or cell surface receptor binding compounds. The media is capable of extending the preservation period past 72 hours and can provide organs with increased functionality upon transplant, animals receiving kidneys stored in the media of the present invention for either three or four days had serum creatinine levels of less than half of those observed in control animals receiving kidneys stored in UW solution (defined in the specification)
                                                                                                                                                                                                                                                                                                    Media comprising antimicrobial polypeptides or and/or cell surface receptor binding compounds and preservation of organs prior to transplant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-JUL-2000; 2000US-221632P.

These were derived from expressed sequence tags from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is

                                                   The present invention relates to novel human GENSET coding sequences (ACC51060-ACC51115) and proteins (ABR48453-ABR48508). The GENSET sequences are useful for preparing a composition for treating GENSET-related disorders. They can also be used as markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on Southern gels, as chromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively determined levels of GENSET expression in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             alone. Lower serum creatinine levels are indicative of healthier kidneys and a more preferable prognosis for the transplant patient. The media of the invention are useful for decreasing the incidence and/or severity of delayed graft function in patients receiving transplanted kidneys stored and/or treated in the media. The media may also be used in procedures such as cardioplegia. It is contemplated that transplant of healthier organs leads to a decrease in chronic rejection. This sequence represents an antimicrobial peptide studied in the development of the transplant
                                                                                                                                                                                                                                                                                                                                                                                                     New GENSET polynucleotides and polypeptides, useful for preparing composition for treating GENSET-related disorders and as reagents assays to quantitatively determined levels of GENSET expression in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25-MAY-2001; 2001US-293574P

                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                       The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central

                                                                                                     The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the

The sequences are CC (ABG99668) and proteins (ABP64682-ABP65022). The sequences are CC (ABG99668) and proteins disprostic and research methods. The polynucleotides may be used in the field of molecular biology as CC phybridisation probes, primers for PCR, for chromosome and gene mapping, CC for the recombinant production of protein, or in generation of anti-sense CC DNA or RNA. The polynucleotides are useful in diagnostics as expressed CC sequence tags (ESTS) for identifying expressed genes or for physical CC markers, or as nutritional sources or supplements. The proteins may be used as molecular weight CC markers, or as nutritional sources or supplements. The proteins may be used to maintain and expand cell population in a totipotential or the CC tissues, transplantation, manufacture of bio-pharmaceuticals or the CC development of bio-sensors. The polynucleotides and proteins are useful for preventing, treating or ameliorating disorders involving aberrant CC protein expression or biological activity, e.g. haematopoietic disorders, central/peripheral nervous system diseases, mechanical and traumatic disorders, non-healing wounds, immune deficiencies and disorders, contral/peripheral nervous system diseases, mechanical and traumatic disorders, or cancer. The polynucleotide sequences of the invention were assembled from ESTs isolated mainly by sequencing by hybridiation, and in some cases, sequences obtained from one or more public databases.

CC set from who isolated mainly by sequencing by hybridiation, and in form the polynucleotide in decrease of the printed specification, but was obtained from one or more public of the printed are fermences.
                                                                                                                                                                                                                                                  RESULT 15
                                                                                                                                                                                                                                                                                                                밁

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG1840-ABL16175) and the encoded proteins

```

RESULT 1 ABX11394

ABX11394 standard; cDNA; 267 BP.

ALIGNMENTS

non-immune defence system; oral candidosis; gene therapy; microbial infection; fungal infection; dental caries; plaque; tartar; cystic fibrosis; systemic infection; Candida infection; mastitis;

Cow; ss; histatin; bovine; salivary secretion;

oral cavity;

Bovine mammary tissue cDNA clone.

ABX11394; 01-MAY-2003

(first entry)

Bos taurus

fungicide; antibacterial; mammary-gland
